NAGA CHANDU MAKKENA

makkenanagachandu17@gmail.com | +91-7386275798 | Narasaraopet,Andhra Pradesh

OBJECTIVE

Motivated Computer Science graduate with a strong interest in software development, web technologies, and machine learning. Experienced in developing a Tours and Travels Management System, Spam News Detection System, and Neural Style Transfer project. Skilled in Python, Java, frontend development, and database technologies, seeking an opportunity to contribute to innovative projects while enhancing technical expertise.

SKILLS

- **Programming Languages:** Python (Basic), Java (Core)
- **Web Technologies:** HTML, CSS, JavaScript, Springboot
- **Databases:** MySQL, MongoDB, SQL
- **Libraries:** Numpy,Pandas
- **Tools and Platforms:** Git, GitHub,Jupyter Notebook

INTERNSHIPS

Web Development Intern - Elewayte May 2024 - June 2024

- Developed aTours and Travels Management System.
- Gained practical experience in frontend development.

AI Intern - Young Minds June 2025 - August 2025

- Worked on Spam News Detection using machine learning.
- Performed data preprocessing and model evaluation.

Python Developer Intern - MSME October 2025 - November 2025

- Developeda Neural StyleTransferprojectusing Python.
- Implemented deep learning concepts for image processing.

PROJECTS

Tours and Travels Management System

- Developeda web-based systemto manage bookings, customer details, and travel packages.
- Used HTML, CSS, and JavaScript for frontend development.

• **ProjectExplanation:** Simplifies travel management by allowing users to explore packages, manage customer information, and handle bookings through an organized web interface.

Spam News Detection System

- Built a machine learning model to classify news as spam or genuine.
- Applied data preprocessing, feature extraction, and model training techniques.

• **Project Explanation:** Analyzes news content and predicts whether it is reliable or spam, helping users identify potentially misleading information.

Neural Style Transfer

- Developeda deep learning project using Python for image processing.
- Implemented neural style transfer concepts to combine the content of one image with the artistic style of another.

• **Project Explanation:** Generates artistic images by applying the visual style of one image to the content of another image using deep learning techniques.

EDUCATION

B.Tech - Computer Science Engineering

University College of Engineering Narasaraopet | November 2022 - 2026 | CGPA: 7.2

Intermediate

Oxford's VIT ,Narasaraopet | June 2020 - 2022 | Score: 93%

SSC

Sri Chaitanya Techno Curriculum, Narasaraopet | March 2015 - 2020 | Score: 96%
